Summary

Frontend and Design Engineer with 5+ years of experience building scalable, accessible web applications and design systems. Proficient in React, Next.js, TypeScript, Vue.js, and Svelte, with expert-level Figma skills spanning wireframing, prototyping, and interaction design. Proven track record owning design systems end-to-end, design tokens, component libraries, documentation, and translating design intent into pixel-accurate, production-ready code. Experienced collaborating cross-functionally with design, product, and engineering teams in Agile environments, with a strong foundation in accessibility standards (WCAG) and design principles.

Experience

Frontend Engineer, Okapi Sports	09/2025 – 03/2026 Remote
- Built and maintained end-to-end frontend features for Okapi's sports tech platform using React, Svelte, and TypeScript, shipping across the full front-end stack with high ownership. - Owned the design system end-to-end: implemented design tokens, component library, and documentation, establishing a shared source of truth for design and engineering. - Implemented AI-powered features using DeepSeek's language model API to process and generate insights from the sports game data and statistics provided, developing asynchronous workflows, managing prompt-response interactions, and ensuring reliable performance through robust error handling and fallback mechanisms. - Designed and built intuitive, functional user interfaces used directly by sports teams and analysts, collaborating closely with design and backend teams. - Integrated Chart.js to visualize real-time sports analytics dashboards, working with backend APIs to surface complex performance data clearly. - Championed engineering quality: code reviews, Jest/Cypress testing, CI/CD integration, and accessibility standards (WCAG).	
Software Engineering Fellow, ALX-Africa	11/2022 – 01/2024 Remote
- Built proficiency in JavaScript, Python, Git, and frontend frameworks through hands-on project work and remote team collaboration. - Applied software architecture principles and common system design patterns to deliver scalable solutions.	
Open Source Contributor, Outreachy / Mozilla	11/2023 – 11/2023 Remote
- Contributed to Mozilla's Balrog release management system, implemented features, fixed bugs, and improved documentation alongside a global engineering team. - Worked across an unfamiliar large-scale codebase, shipping meaningful contributions within a short timeframe.	

Frontend Engineer, Hitech Solutions

05/2022 – 11/2022

Remote

- Built and shipped the Royal Grocery Shoppa e-commerce platform end-to-end using Next.js, React, and Tailwind CSS, serving real users at scale.
- Designed and built a reusable component library, improving delivery speed and consistency across the product.
- Integrated third-party APIs and Material UI components to accelerate development and extend platform functionality.
- Collaborated directly with the product team to understand user needs and ship intuitive, responsive interfaces.

Frontend Engineer, Sycamore NG

11/2021 – 04/2022

Remote

- Built user-facing financial features with Vue.js and Tailwind CSS; integrated Chart.js to visualize complex financial analytics data for end users.
- Worked with backend APIs to surface data clearly and reliably across the frontend.
- Participated in code reviews and Agile sprints to maintain quality and delivery speed.

Software Engineering Fellow, Tech4Dev

03/2021 – 03/2022

Remote

- Built responsive web interfaces with React, JavaScript, and SQL.
- Prioritized accessibility and performance to support a wider user base from the ground up.

Education

BSc Human Nutrition and Dietetics, Meru University of Science and Technology

09/2015 – 02/2021

Skills

Languages & Frameworks

- JavaScript
- TypeScript
- React.js
- Next.js
- Vue.js
- Svelte
- HTML5
- CSS3
- Python
- API Integration
- Tailwind CSS
- Shadcn

UI/UX & Design

- Design System
- Accessibility (WCAG)
- Figma
- Design tokens
- Component Library Architecture
- Story book
- Wireframing
- Prototyping
- Responsive design

Testing

- Cypress
- Jest

Data Visualization

- D3.js
- Chart.js

State Management

- Redux
- Zustand
- Context API

Tools & Workflow

- Git
- GitHub
- CI/CD
- RESTful APIs
- Agile, Scrum

AI Tools

- Open Code
- GitHub Copilot
- Cursor
- v0
- Figma AI

Collaboration

- Cross-functional collaboration
- Remote async communication
- Documentation
- Agile & Scrum workflows
- Design-engineering handoff

Projects

Yuno, yuno.somethinglabs.io

- Design system toolkit that generates font pairings based on typographic theory, optically balanced color palettes, and a shareable component library.
- Built with React; includes a font pairing engine, nine-stop color system with contrast validation, and live component previews.
- Supports one-command config export for use in any React project.
